

deister electronic supports the Dutch mountain bike youth team "CSM" with new jerseys

The "CSM" mountain bike youth team trained very hard for this year's UEC MTB Youth European Championships 2020 in Italy and was supported by deister electronic GmbH with new jerseys.

Barsinghausen, July 28, 2020 - The year 2020 would have been the second year that the European Youth Mountain Bike Championships would have taken place in the Italian city of Pila, at an altitude of 1800 m on the mountain plateau above the Aosta Valley. In winter there is a ski slope and in summer it is the mountain bikers' playground. Unfortunately, due to the COVID-19 pandemic, the championships had to be postponed until 2021.

At the event, which lasts several days, young people compete in the age categories U15 and U17. In addition to individual participations, it is possible to put together your own teams, each of which must consist of three athletes and include at least one girl. So the friends Casper van Hartkamp, Senna Remijn and Minu Stoffers, who are active in different clubs, but who met each other at regular races in the Dutch Mountain Bike League, joined together to form the team "CSM" (Casper, Senna, Minu).

deister electronic GmbH appreciates the hard work of the three young and talented athletes from the Netherlands for the European Youth Championships and supports the young team with new jerseys. Even though these will not be used this year, deister electronic hopes that the "CSM" team will be able to compete again next year and wishes them all the best for the coming season.

Press Release

About deister electronic

For 40 years, deister electronic has been an internationally modern and sustainably managed family business that stands for innovative and safe automation solutions. With five international locations, we sell our solutions worldwide and have a strong international focus. Our solution portfolio is used, for example, in the following applications: Long-range identification for access control, access control to buildings, automatic management of work equipment and valuables in electronic locker systems, dispensing and management of textiles for laundry and hospital logistics.
