TAKE YOUR CHANCE!

A career at deister electronic
For more than 40 years, deister electronic has been an internationally modern and sustainably managed family business with headquarters in Barsinghausen. We develop secure automation solutions that enable our customers to automate processes, reduce operating costs and increase security levels.

We are proud that many of the world’s leading companies are among our customers and appreciate our innovative spirit, outstanding product quality and comprehensive service.

With a worldwide staff of 250 employees and 5 international offices, we are able to serve our customers globally and optimally respond to local conditions and customer requirements. This means that innovation and the customer are always the focus of our attention.
From research and development through production to service and support, deister electronic develops secure automation solutions for the whole world at its Barsinghausen location.

As an independent manufacturer, we have the freedom to develop our ideas with a focus on innovation and continuous improvement. The customer is the focus of our attention and is involved in product development from the very beginning within the framework of our agile working methods.

Our solutions are used in the administration of buildings and company premises to manage access to buildings and individual rooms, to monitor the building and to control access to the site. In addition, our solutions can also manage work equipment, processes, sensitive items and consumables. The big advantage for the customer: Everything works fully automatically.
INNOVATION IS OUR DRIVING FORCE

- Over 40 years of experience and 100% privately owned. Giving us the flexibility we need.
- 120 Patents and 30% reinvestment in research and development.
- RFID Experts and co-inventor of today’s RFID technology.
- Over 10,000 installed systems including the management of more than 10,000,000 assets.
1978
Anatoli Stobbe, CEO & Founder, founded deister electronic in 1978 in Barsinghausen near Hanover.

1980

1985
First own solution: A guard tour system, which quickly became the leading system for security companies.

1987
Expansion - Subsidiaries are established in the USA, Canada, Great Britain and France. Later, further expansions to Japan and Singapore took place.

1990
Development of the first readable and writeable RFID chip. This technology lays the foundation for today’s variety of products and over 100 worldwide patents.

1992
RFID is now the core technology and production of the first access control readers begins. The product portfolio grows. Many markets become aware of deister electronic and become accessible.

2004
deister electronic develops the first textile laundry Transponder. This transponder can be flexibly integrated into clothing and products such as doormats or life vests.

2006
Electronics become mechatronics. With the introduction of electronic key cabinets and digital locking systems, the know-how regarding mechanical design and production increases at deister electronic.
In 1978, Anatoli Stobbe founded the company deister electronic. At the beginning, the small team developed for other companies. Until 1985, when the first own solution was developed - an electronic guard tour system that automatically documents the guard’s patrols. It was a complete success and since then deister only developed its own products and systems and continuously expanded its portfolio of solutions.

Today, our portfolio comprises over 10 solutions and hundreds of different products that can be operated stand-alone or in a connected system.

In the course of developing new products, many innovations have emerged, such as the first RFID transponder chip, which is the foundation of today’s RFID technology. Until today, innovation is the driving force at deister electronic.
"I love it! It is doing great and most everyone loves how the system works. I passed on the idea to add another 256 key cabinet in a remote area and everyone thinks it’s a great idea. I cannot speak any more highly of deister electronic equipment."

Matthew Downey
Security Supervisor - Tesla

Our customers solve highly complex tasks in our society on a daily basis, such as industry, transport, health care, police, hotels, chemistry and many others. We support these companies in their efficiency in many ways every day. After all, when administrative tasks are automated, there is room for more productivity.
Demanding tasks require specialists. And it is exactly these people who feel comfortable at deister electronic, because the employees and the working atmosphere at deister are something very special. Ok, that’s what many companies claim about themselves, but really a lot is different at deister electronic. Humanity, family values and flat hierarchies are written in capital letters here and making mistakes does not mean failure to us, but is a motivation to improve. We want to talk about problems, make mistakes, learn from them and improve - collectively. This is exactly what our customers expect from us. For this reason, we also create a great environment for our employees in which they enjoy working.
WE PROVIDE VITAMINS

Fresh apples, juices and water are available 365 days a year free of charge. And since coffee is a major fuel for many, it is also here - for free - in all its variations, such as latte macchiato, espresso, chocolate cappuccino or just coffee.
WE CREATE FREEDOM

Not only for lunch break do our rooms, modern kitchens and food areas invite you to make your day creative and varied. To recharge your batteries in between, our inner courtyard invites you to relax with beautiful beach chairs, seating and plenty of free space.
TEAM-BUILDING

Team building experiences promote team spirit, communication and motivation. The events also have positive effects on the working atmosphere in the company.
WE CELEBRATE TOGETHER

At Christmas, we celebrate the end of the year together. In summer, the whole family is invited to our summer party. Since we give it all every day, we also have a good time.
“The working atmosphere at deister electronic is very pleasant. The mutual inspiration and the joint development of products works wonderfully here. Some colleagues have been employed here for over 20 or 30 years. I myself have been here for 29 years now. I think that says it all.”

Stefan E.
Director - Research & Development (CTO)
IT COULDN’T BE BETTER

“...My performance in the area of programming is totally appreciated and is even being used in a fully automatic laundry dispensing system, which we test and further develop together with the customer. That really feels great!”

Maximilian B.
Intern - Development

THERE’S A LOT INVESTED IN ME

“We receive very good and varied training and support. We learn a lot about what we need for our day-to-day work and as trainees we are just as much a part of the team as long-term employees. We are not the typical coffee makers!”

Celine E.
Apprentice - Marketing
