

deister electronic among the top 10 newcomers in the current ranking of medium-sized companies

In the database of medium-sized companies of DIE DEUTSCHE WIRTSCHAFT DDW, deister electronic ranked well from the beginning.

Barsinghausen, May 24th, 2019 – For deister electronic GmbH, things are consistently progressing uphill: the Barsinghausen (Lower Saxony) based specialist for secure automation solutions in the areas of key management, access control and vehicle identification up to personal protection and guard tour systems as well as asset management was among the top 10 of the DDW medium-sized company database. As an established knowledge portal, Die Deutsche Wirtschaft (DDW) offers market information and rankings on the leading players in the German economy. In the course of the DDW ranking "Mittelstand 10.000" deister electronic, as market leader for guard tour systems in the category "market leadership" in the DDW scoring index, achieved a particularly strong result with a place among the top 10 in the DDW ranking index - and as a newcomer achieved the third highest jump in the new ranking index.

"With technical innovations such as our guard tour system and now more than 120 patents, we have continuously worked our way forward in the RFID industry and have grown into an internationally active company," says Nicolas Stobbe, the future successor to company founder and Managing Director Anatoli Stobbe. "It's good to see that our commitment has paid off in over 40 years of existence and continues to pay off for our users around the world. The placement in the DDW ranking is once again a gratifying confirmation of our overall strategy."

About deister electronic

For 40 years, deister electronic has been an internationally modern and sustainably managed family business that stands for innovative and safe automation solutions. With five international locations, we sell our solutions worldwide and have a strong international focus. Our solution portfolio is used, for example, in the following applications: Long-range identification for access control, access control to buildings, automatic management of work equipment and valuables in electronic locker systems, dispensing and management of textiles for laundry and hospital logistics.
