

# First international award for the Textile Management System teXtag

**Spain, December 14<sup>th</sup> 2018** - The Seguritecnia awards the laundry management system teXtag by deister electronic as the best marketed security product 2018 in Spain.

The award confirms the value added of the deister electronic laundry dispensing system. The solution can be individually adapted for each customer. The control of the textiles by UHF labels reduces the loss of uniforms and other clothes and thus minimizes operating costs.

"We at deister are very pleased to have received this award. Our solutions are characterized by a high premium quality. TeXtag is a pioneer product in Spain. The award, which we received in the same year of our Spanish market development, makes it increasingly clear that there will also be a great potential for our teXtag solution in the future. This motivates me personally enormously," confirms Jesús Garzón, Country Manager Iberia.

The award ceremony, organized by Seguritecnia, took place on 14 December in the "Los Tapices" room of the Meliá Castilla Hotel in Madrid. More than 500 experts from Spain's public and private security areas took part in the event. The aim of the event is to publicly honor the achievements and actions of important persons, institutions and institutions involved in the promotion and development of the security area in 2018.

The event was managed by leading representatives of the administration and security personnel. Many professionals from the industry took part, representing a high level of commitment, professionalism and service to security. The awards are some of the most important in the field of security and are presented by a neutral jury from the technical advisory board of the magazine "Seguritecnia".

## Press Release

### About deister electronic

For 40 years, deister electronic has been an internationally modern and sustainably managed family business that stands for innovative and safe automation solutions. With five international locations, we sell our solutions worldwide and have a strong international focus. Our solution portfolio is used, for example, in the following applications: Long-range identification for access control, access control to buildings, automatic management of work equipment and valuables in electronic locker systems, dispensing and management of textiles for laundry and hospital logistics.
