

Maxxess eFusion Security Management Platform integrates deister electronic Key Management System

Users can manage all their keys from their central security management platform

BRACKNELL, UNITED KINGDOM, 24 MAY 2019 - Delivering another high-value benefit to users, the [Maxxess eFusion](#) security management platform now integrates off-the-shelf and seamlessly with the widely used range of deister electronic key management system.

With this latest off-the-shelf integration eFusion users can now manage all their keys from their centralised security management platform, reducing the risk of security breaches and streamlining their day-to-day operations.

Modular and scalable, the [deister electronic system](#) encompass a range of cabinets which can store anything from 8 keys to thousands. They can be used stand-alone or as part of a global corporate solution, in applications ranging from hotels and leisure settings to retail and up-scale residential developments.

“Knowing who has a particular key at any given moment significantly reduces the risk of losses and criminal activity,” says Lee Copland, Managing Director, Maxxess EMEA. “The deister electronic system make that task much simpler. And with real-time reports logging all system usage, users can be held accountable for any misuse, theft or loss of keys – better protecting buildings and assets.”

The integration with deister electronic system is just the latest example of how the eFusion platform gives users the freedom to integrate, customise and adapt their security systems to meet both current needs and emerging risks. eFusion’s open technology software supports more than 60 off-the-shelf integrations from leading vendors, providing complete freedom to customise solutions combining surveillance, access control, fire and intruder systems with back-office processes.

Crucially, integration with Maxxess eFusion also reduces complexity for installers and their customers and offers unlimited future scalability at affordable price points.

“Off-the-shelf integration between our key management systems and eFusion will deliver major benefits to our customers,” says Darren Harrold, Head of UK Operations at deister electronic. “This means they can now link their essential systems together – including their surveillance,

intruder, access and fire detection systems - making a wide range of premises easier to manage and more secure.”

Visitors to **IFSEC International** can see Maxxess eFusion and deister electronics key management in action, with both companies exhibiting, on stands **IF2120** and **IF410** respectively, from 18th to 20th June at London’s ExCel.

About Maxxess

Maxxess is a U.S.-based, privately held, global corporation specialising in security management solutions and innovative technologies that are effectively transforming the way businesses approach and implement security. Leading organisations worldwide, from healthcare to hospitality and transport to telecoms, choose Maxxess for its expertise in access control and database integration.
